

Using Jupyter Notebooks as a Data Scientist “Work bench” for quality assurance of data processing flows and quality control of data series

Rob Thomas, Sarah Flynn, Will Meaney, Siobhan Moran, Ramona Carr, Adam Leadbetter

## OUR VISION

*Our ocean wealth will be a key element of our economic recovery and sustainable growth, generating benefits for all our citizens, supported by coherent policy, planning and regulation, and managed in an integrated manner.*

### GOAL 1

## THRIVING MARITIME ECONOMY

- Sustainable economic growth of our marine/ maritime sectors
- Increase the contribution to our national GDP
- Deliver a business-friendly yet robust governance, policy and planning framework

### GOAL 2

## HEALTHY ECOSYSTEMS

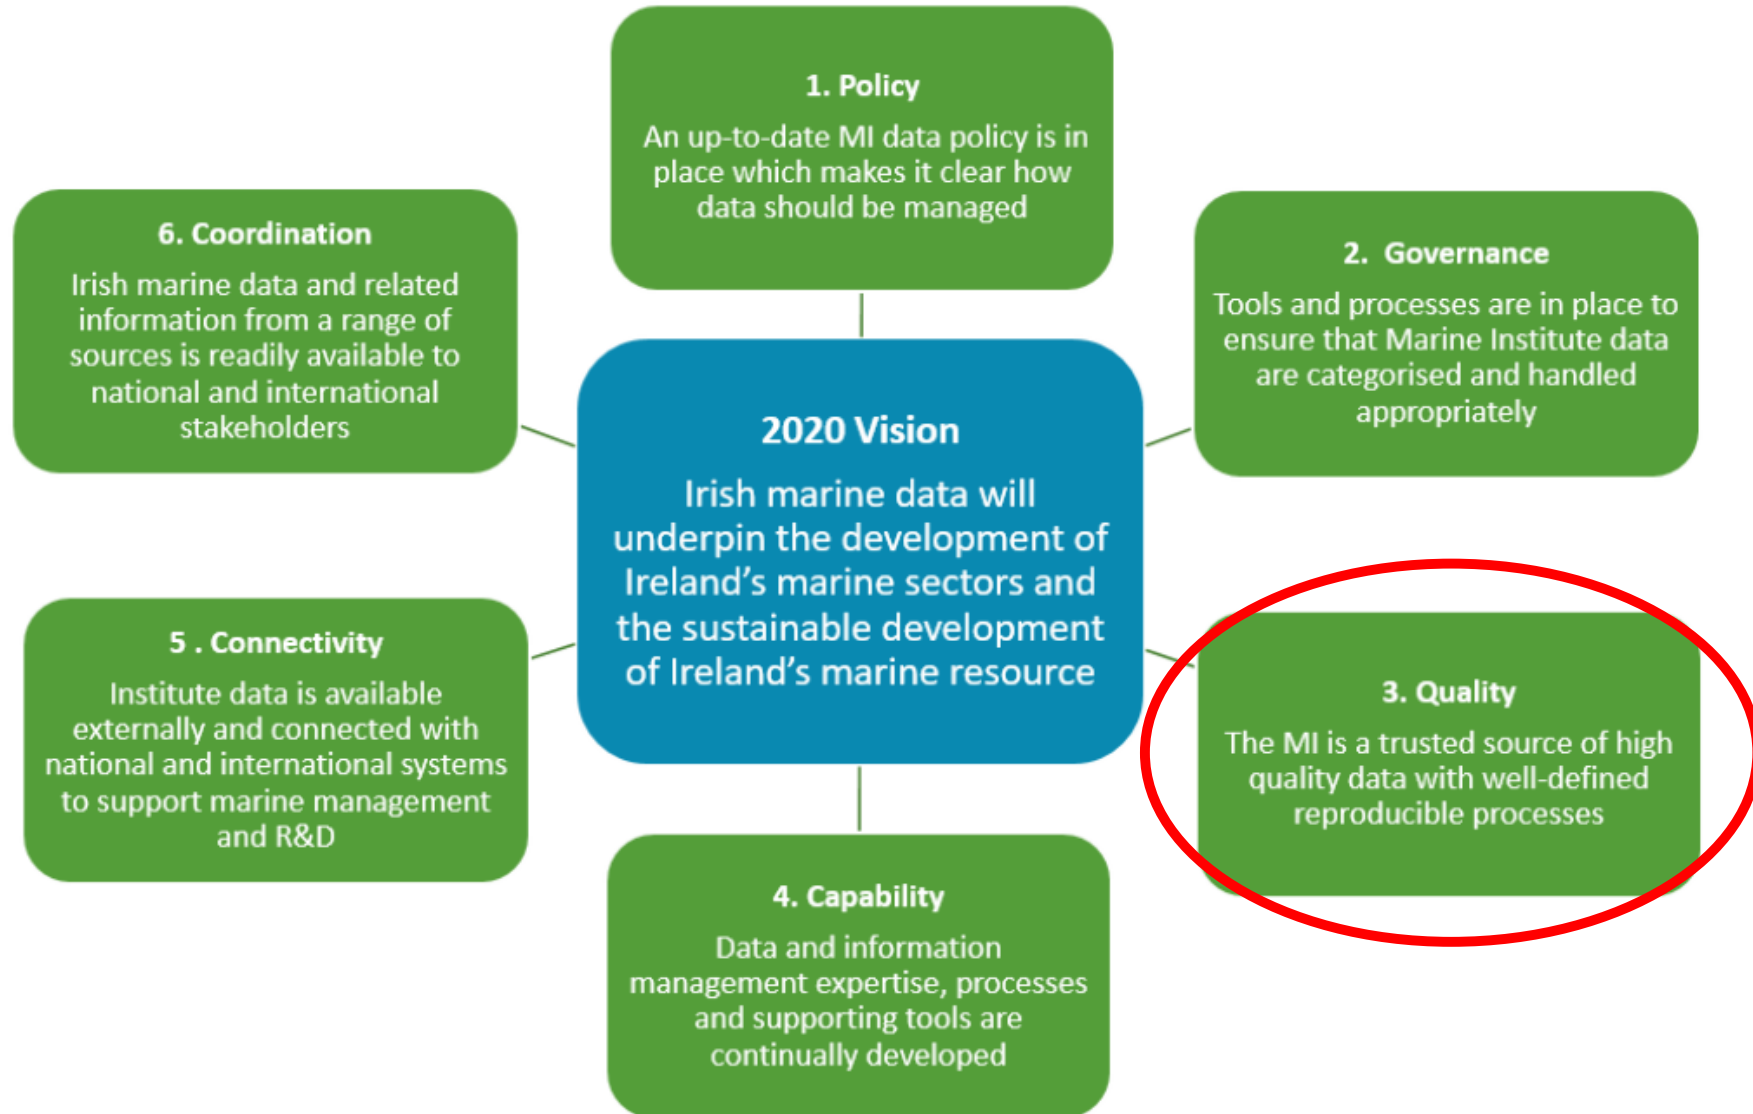

- Protect and conserve our rich marine biodiversity and ecosystems
- Manage our living and non-living resources in harmony with the ecosystem
- Implement and comply with environmental legislation

### GOAL 3

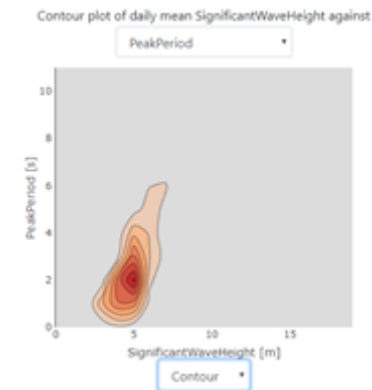

## ENGAGING WITH THE SEA

- Building on our maritime heritage, strengthen our maritime identity
- Increase our awareness of the value, opportunities and societal benefits
- Engagement and participation by all

The screenshot shows the IODE website interface. The header includes the IODE logo and the text 'Intergovernmental Oceanographic Commission of UNESCO International Oceanographic Data and Information Exchange'. A navigation menu on the left lists 'General Information' and 'Expert Information' with various sub-links. The main content area features a news article titled '11 September 2017: OTGA/QMF IODE Quality Management Framework training course 11 - 14 September 2017, Oostende, Belgium'. The article includes a photo of a training session and text describing the course as a practical workshop for NODCs and ADUs. It mentions that 11 people from 8 countries are participating and that Mr. Loic Petit de la Villeon from SISMER (IFREMER) will join via videoconference. The article also provides details about the course's purpose and a link to the OTGA website.

# QMF Principles & Benefits

1. Relationship management
2. Customer focus
3. Engagement of people
4. Leadership
5. Process approach
6. Continual Improvement
7. Evidence-based decision making

## Customer Feedback

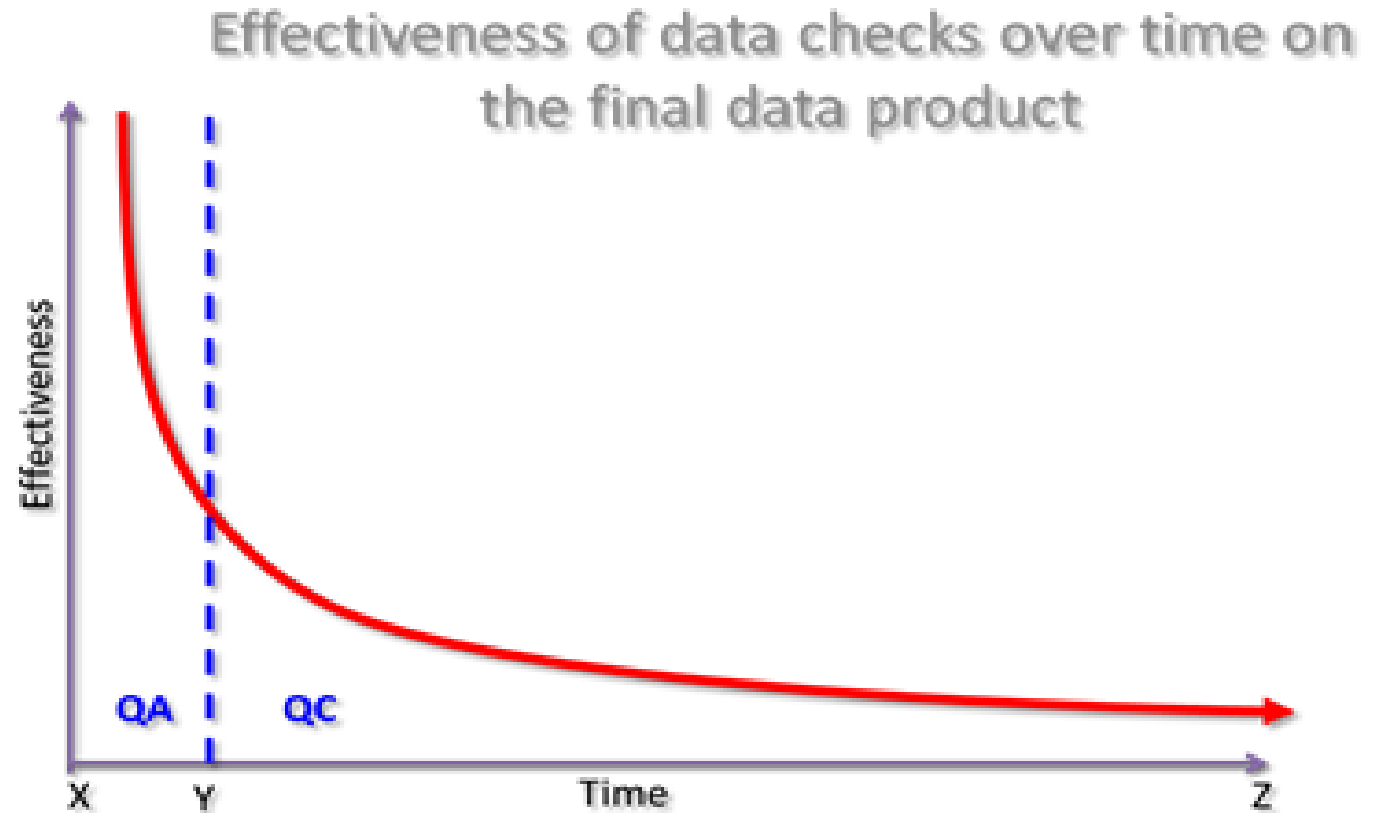

# Assurance vs Control?

## Quality Assurance

- Proactive
- Aim is preventing defects
- Focus on the process

## Quality control

- Reactive
- Aim to detect and correct
- Doesn't consider the process

David Stokes (pers. comm.)

# QA vs QC: a case study

16.8 hours per car  
34 defects per 100 vehicles

All workers responsible for detecting defects during assembly process.

57 hours per car  
78.7 defects per 100 vehicles

Separate QC team involved post assembly.

## Data Requests

The following outlines the steps required to carry out the data request service page on the MI website

1. A data request is received by email from [institute@marine.ie](mailto:institute@marine.ie)
2. The mail will contain a link to and details of the data request.
  - Open <https://www.marine.ie/Home/user> and log in
  - Click on the data request link in request email
  - Next check the detail of the request to see if the data is available on the online MI portals:
    - Marine Data Online – <http://data.marine.ie>
    - Marine Institute ERDAPP server - <http://erdapp.marine.ie>
    - Irelands Marine Atlas
    - Irelands Marine Renewable Energy Atlas
    - INFOMAR Web Map Viewer
  - If the data cannot be downloaded from any of the above, you may need to be sent to Data Steward and a licence agreement.
3. Click on 'Edit' tab on the top of the page. Change the name under 'Assigned To'.

4. Take note of the data request number in the form
5. Open the Data Request Report Manager <http://www.marine.ie/DataRequest/Report.aspx?lic=1234567890> and use the request number to do

INSERT TABLE FROM DATA LICENCE

Please notify us if there are any constraints regarding publishing data as per conditions set out in Section "4. Publications" of this licence agreement.

Please note that all data delivered to the requestor must be delivered via the Data Request Service Team.

Also note if you are searching for previous emails they will be stored in the Data Request email folders and not your own.

Email the data requestor to acknowledge receipt of their data request through the MI Data Request Service. Attach the data licence agreement (pdf) for their signature. Use the following template:

From: [datarequests@marine.ie](mailto:datarequests@marine.ie)  
To: Internal Data Requestor  
CC: [datarequests@marine.ie](mailto:datarequests@marine.ie)  
Subject: Marine Institute Data Request 2017/xxxx

The Marine Institute (MI) acknowledges receipt of your data request through the MI Data Request Service. We have taken your request details and shall pass them onto the relevant data steward in our organisation. We will be in contact with you in due course.

Our signed Marine Institute Data Licence Agreement is attached. We require this to be signed by you within the Acceptance of Agreement section above "For the Licensee" and returned to us before we release data to you.

Please note that if you intend publishing data supplied that the conditions set out in Section "4. Publications" of this licence agreement apply.

Note: The licence agreement needs to be signed by the data requester before the data delivered.

11. Once the data and signed licence agreement is received, the data is sent to the requester via data request: [datarequests@marine.ie](mailto:datarequests@marine.ie)
  - If the data is too big to send via email then it can be sent via [HEAnet](#) File Sender.
12. Store a copy of the data and the signed licence agreement in.
13. Login to the data request page to close the data request and enter information to the following areas:
  - Status – Close

- Area of activity – select as appropriate
- Comments – use while data request is in progress to give any information that might be useful if another member of the team needs to pick up the request
- Resolution – input what data was sent
- Date drop down box: – When Licence Agreement was received
- Date drop down box: When data was received

14. Each morning an email will be sent to the data request mailbox with a status of all requests which are still 'Open' or 'In Progress', to ensure we are tracking each data request.

<http://www.marine.ie/Home/open-data-requests>

15. If a requester sends a query for data to your own personal mail, then you need to send them the online data request page to submit a data request via

<https://www.marine.ie/Home/marine-institute-request-digital-data>

### Wave rider data

- Monthly data is zipped from \\galwayfs03\WaveRider and transferred into \\galwayfs03\DataRequests\WaveRider
- The following documents to support the data are located on \\galwayfs03\DataRequests\WaveRider
  - o [DWR3 File Details v1](#)
    - Galway Bay and West Wave – 2009 - 2012
    - All Belmullet data
  - o [DWR4 File Details v0](#)
    - Galway Bay and West Wave – 2013 to date
- Data is sent through [HEAnet](#) or [FileSender](#) (depending on size)
  - o The above documentation is provided to the data requester
  - o Copy the link of where data is located and keep it in the data request ID folder, along with the signed license agreement.

[Contents](#) | [Data Processing](#) | [Quality Control](#)

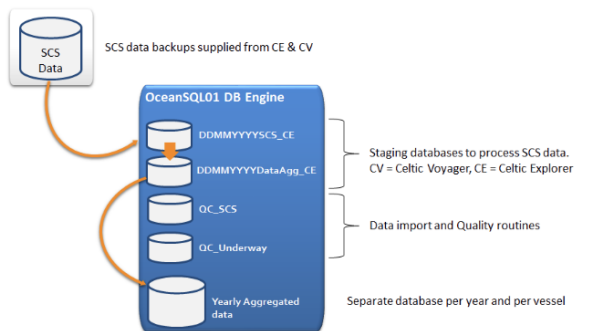

### SCS Underway Data - Overview

This section captures the complete lifecycle of underway data for inclusion in the core Ocean Science datacentre. This process includes:

- Initial data collection.
- Extract Transform & Load (ETL) procedures.
- Quality controls.
- Final inclusion in the production Ocean Science datacentre.

### Database Overview

The illustration below shows important databases used in the processing of Underway data. Each time a backup SCS database is received from a vessel, two new databases are created to process the data (SCS & DataAgg). Two additional databases are available to support data extraction and quality control stored procedures. Finally, the processed and aggregated data is loaded into a final yearly storage database.

### Summary of Quality Check flags:

The following codes/flags are used to record the quality of each parameter under QC:

```
In [6]: # Display all
df = pd.read_sql_query('SELECT * FROM dbo.[tblflags]', SCS_QC_engine)
df.head(20)
```

Out[6]:

qc_flag_id	flag_description	
0	0	No QC
1	1	Good
2	4	Failed physical limits
3	5	Failed local limits
4	9	Missing
5	13	Location falls on land
6	14	Location falls in port
7	15	Impossible location
8	16	Failed automated sounding check
9	17	Failed sea temperature check
10	18	Thermosalinograph fails comparison with TI20
11	19	Failed visual sounding check
12	20	Failed air temperature check
13	21	Failed atmospheric pressure check
14	22	Failed salinity check
15	23	Failed fluorescence check
16	24	Failed visual check

## 11 September 2017: OTGA/QMF IODE Quality Management Framework training course 11 - 14 September 2017, Oostende, Belgium

The training course 'IODE's Quality Management System Essentials for NODCs and ADUs' is taking place this week at the IODE Project Office in Ostend, Belgium.

11 people from 8 countries are participating in this OceanTeacher Global Academy (OTGA) training course, taught by Greg Reed. On Wednesday Mr Loic Petit de la Villeon from SISMER (IFREMER) will join via videoconference to share his experiences and lessons learned on implementing a Quality Management System (QMS) for SISMER, the French Accredited National Oceanographic Data Centre.

This is a practical workshop: the participants work in teams to complete exercises on each topic to reinforce their understanding of the requirements for a quality management system and the IODE accreditation requirements for NODCs and ADUs. More on OTGA: <http://www.oceanteacher.org>
